The invention relates to a novel fusion protein, comprising a non-FC component and an FC region having a first portion derived from one or more human 1gG4 antibodies and a second portion derived from one or more human 1gG4 antibodies. The invention further comprises: a method for reducing antibody-mediated cell activation or inflammation events, comprising antibody-mediated cell activation or inflammation events, comprising antibody-mediated cell activation or inflammation events, comprising antibody including an engineered heavy chain constant region having a first portion derived from one or more human 1gG2 antibodies and a second coption derived from one or more human 1gG2 antibodies and a second coption derived from one or more human 1gG2 antibodies and a second correasing the half life of a non-FC component, increasing the avidity of increasing the half life of a non-FC component, increasing the avidity of component for a molecule to which the non-FC component binds, correction, or improving expression of a non-FC component in mammalian cells creceptor binding and complement activation associated with a FC fusion protein, or improving expression of a non-FC component in mammalian cells containing the nucleic acid, a host cell transfected with an expression containing the nucleic acid, a host cell transfected with an expression containing the nucleic acid, a host cell transfected with an expression creceptor, and a composition comprising the fusion protein are useful in preventing or reducing antibody-mediated cell activation or release syndrome, and in reducing antibody-mediated cell activation or release syndrome, and in reducing antibody-mediated cell activation or composition, methods are useful for preventing or the invention. This composition, methods are useful for preventing infections. This composition, methods are useful for preventing of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   GATCAGCTGGTTTGTGAACAACGTGGAAGTACACAGGCTCAGACACACAAACCCATAGAGA 1025

AAF55099;

New soluble recombinant protein, useful e.g. as immunostimulant, comprises dimeric major histocompatibility complex molecule fused to immunoglobulin Fc region. Recombinant protein; alpha chain; beta chain; MHC; immunoglobulin; major histocompatibility complex; Fc region; antigen; T lymphocyte; immunostimulant; vaccine; infection; tumour; ss. DNA encoding a fusion protein comprising a beta chain of MHC. Location/Qualifiers (CNRS) CNRS CENT NAT RECH SCI 29-JUL-1999; 99FR-00009862. 28-JUL-2000; 2000WO-FR002193 Glaichenhaus N, Malherbe L; 15-MAY-2001 (first entry) 1. .921 /*tag= WPI; 2001-182944/18. P-PSDB; AAB67481. WO200109194-A1 08-FEB-2001. Synthetic. Key

The specification describes soluble recombinant proteins that comprise at least a dimer formed from the alpha and beta-chains of MHC (major histocompatibility complex) Class I and II molecules in which at least one chain has, attached to its C-terminus, at least part of the Fc region of an immunoglobulin. The recombinant proteins, when linked to an antigenic peptide, are used to count and/or purify antigen-reactive T lymphocytes and to characterize their phenotype, e.g. in preclinical evaluation of vaccines. They are also used as immunostimulants, particularly for vaccine development (against infections and tumours), to count and determine phenotype of autoreactive T cells in subjects with, or at risk of developing, autoimmune diseases, e.g. for staging or evaluating treatments, and (to purify and/or enrich Ag-reactive T cells from cell cultures or preventative cellular therapy. The present sequence encodes a recombinant protein of the invention, comprising a beta chain of MHC molecules

```
The invention relates to a novel class II major histocompatibility complex (MHC) antigenic peptide composite comprising a peptide containing the T-cell antigenic determinant of a mucous membrane invasive protein and the extracellular region of a class II MHC molecule or at least part of the extracellular region of the class II MHC molecule having an amino
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Peptide-Class II major histocompatibility complex (MHC) composite, useful for detecting antigen specific CD4+ T-cell, comprises antigen peptide containing epitope of mucous membrane invasive protein, and extracellular region of MHC.
                                                                                                                                                                                                                                                                                                                                                  693 CTTCCAGGTCCTGGTCATGCTGGAGATGACCCCTCATCAGGGAGAGGTCTACACCTGCCA 752

                                                                                                                                                                                                                                                                                                                              ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                ò
                                                                                                                                                                                                                                                                                                                                                                                                                              This sequence represents a hybrid IA beta chain gene, containing the chicken ovalbumin peptide (cOVA). This sequence was used in the construction of a hybrid in alpha beta dimer. The encoded protein (pladeoVA) was found to be more stable than the IA alpha beta dimer. The stability was decreased by the addition of a MHC groove specific binding peptide (e.g. see ARR82527, ARR82528 and ARR82511), compared to an increase seen on the addition of a MHC binding peptide to IE k/d-MCC. These complexes may be used to regulate an immune response. The complexes are capable of being recognised by a TCR alone or in combination with additional MHC proteins. These complexes are useful for therapeutic purposes and experimental purposes. They can also be used as reagents for the treatment of diseases including autoimmune diseases, immunodeficiency

```
acid sequence comprising one or more deletions, substitutions or additions. The molecule of the invention may be useful for detecting an antigen-specific CD4+ T-cell by flow cytometry and for presenting a microorganism-derived mucous membrane invasive protein as an antigen. The method of the invention enables efficient detection of antigen-specific activation of CD4+ T-cells in the mucous membrane. The current sequence is that of the class II major histocompatibility complex-related I-ho(alpha)-Cholera toxin B subunit (CTB)-leucine zipper (LZ)-BirA fusion cDNA of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This sequence represents a hybrid IA beta chain gene. This sequence contains a fragment of the IB alpha chain (residues 56-73), sa well as a linker and cleavage lite. This sequence was transfected into a B cell line (M12.C3) using plasmid pM12-IAb-EB. It was found that the encoded sequence was expressed in these cells. Complexes such as this may be used to regulate an immune response. The complexes are capable of being recognised by a TCR alone or in combination with additional MiC proteins. These complexes are useful for therapeutic purposes and experimental purposes. They can also be used as reseants for the treatment of diseases including autoimmune diseases, immunodeficiency diseases,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           108
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              67 TGCTGATGGTGCTGAGCAGCCCCGGGACTGAGGCCGGAAACTCCATCTGCTTCTCGCCGT 126

The invention relates to a novel class II major histocompatibility complex (MHC) antigenic peptide composite comprising a peptide containing the T-cell antigenic determinant of a mucous membrane invasive protein and the extracellular region of a class II MHC molecule or at least part of the extracellular region of the class II MHC molecule having an amino acid sequence comprising on or more deletions, substitutions or a matigen-specific comprising of the invention may be useful for detecting an antigen-specific CD4+ T-cell by flow cytometry and for presenting a microcoganism derived mucous membrane invasive protein as an antigen. The method of the invention enables efficient detection of antigen-specific activation of CD4+ T-cells in the mucous membrane. The current sequence is that of the class II major histocompatibility complex-related I-hablentidna coli heat-labile toxin B subunit (ITB)-leucine zipper (LZ)-BirA fusion cDNA of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Peptide-Class II major histocompatibility complex (MHC) composite, useful for detecting antigen specific CD4+ T-cell, comprises antigen peptide containing epitope of mucous membrane invasive protein, and extracellular region of MHC.

29-JUL-1994; 01-FEB-1995; 17-JAN-1997; Example 17; Fig 29; 126pp; English.

The invention relates to a major histocompatibility complex (MHC) fusion complex (I) comprising an MHC molecule that contains a peptide-binding groove, and a presenting peptide covalently (e.g. an antigent peptide) linked to the MHC molecule, where (I) is capable of modulating the activity of a T cell. Also included are a DNA construct coding for the complex, where the MHC molecule is a class II MHC (e.g. mouse I-Ad or I-As or human HLA-ABI, human leukocyte antigen-DRI), a multivalent MHC fusion complex comprising two or more linked complexes, identifying a peptide that can modulate the activity of T cells (involving introducing into host cells cloning vectors that each contain the fusion complex DNA, culturing the host cells under conditions suitable for expression of the MHC fusion complex, and selecting host cells that express MHC fusion

complex that modulate the activity of T cells), a single recombinant expression vector comprising DNA that codes for the alpha and beta chains of the fusion complex MHC protein, a single recombinant expression vector comprising DNA that codes for a T cell costimulatory factor and the alpha and beta chains of the MHC fusion complex. The DNA constructs can contain the expression of the fusion complex. Also included are inducing an immune cresponse in a mammal (including vaccinating a mammal against a targeted disorder, by administering DNA sequence comprising a fusion complex, or DNA sequence coding for a fusion complex which is a single chain fusion at the contains a transmembrane domain, and a presenting peptide that is a T cell receptor (TCR) antagonist or partial agonist and is covalently linked to the MHC protein, or DNA sequence complex which is a single chain fusion molecule. The methods are useful for identifying a peptide that can modulate the cativity of T cells, inducing an immune response in a mammal disorder culculumnant response in a mammal. The disorders include an autorimmune disorder such as multiple sclerosis, insulin-dependent disbetes mellitus, rhemmatoid arthritis, mysathenia gravis or chronic allergies. The present contains a mouse MHC class II I-Ad fusion complex of the ä 81 AGCAGCCCCGGGACTGAGGGCGGAAACTCCATCTGCTTCTCGCCGTCGCTGGAGCACCCG 140 105 gerécreacedréanateancéanécrésicérécracegnéseségeségnadeségeségn 164 165 GGGGGAAACTCCGAAAGGCATTTCGTGGTCCAGTTCAAGGGCGAGTGCTACACCAAC 224 320 440 560 561 GTGACAGATTTCTACCCCAGCCAAGATCAAAGTGCGCTGGTTCAGGAATGGCCAGGAGGAG 620 66 AGCAGCCCAAGGAC-------CTTAAGTATCTCTCAGGCTGTTCAC 104 GGTGGAGGCTCCGAAAGGCATTTCGTGGTCCAGTTCAAGGGCGAGTGCTACTACACCAAC 260 225 GGGACGCACATACGCCTCGTGACCAGATACATCTACAACCGGGAGGAGTACGTGCGC 284 TACGACAGCGACGTGGGCGAGTACCGCGCGGTGACCGAGCTGGGGGCGGCCAGACGCCGAG 380 344 404 AGACACAACTACGAGGGGCCGGAGACCAGCACCTCCCTGCGGCGCTTGAACAGCCCCAAT 500 464 524 680 525 greacagarricracceaeceaagarcaaagreeceregricaggarreeceagaggag 584 21 ATGGCTCTGCAGATCCCCGGCCTCCTCTCAGCTGCTGGGTGGTGGTGGTGCTGTGCTG 285 TACGACAGCGACGTGGGGGGAGTACCGCGGGGGACCTGGGGCGGCCAGACGCCGAG 405 AGACACAACTACGAGGGCCGGAGACCAGCACCTCCCTGCGGCGGCTTGAACAGCCCAAT GTCGCCATCTCCCTGTCCCAGGACAGACGCCCTCAACCACCACAACACTCTGGTCTGTTCG ACAGTGGGGGTCTCATCCACACAGCTTATTAGGAATGGGGACTGGACCTTCCAGGTCCTG GGGACGCAGCGCATACGGCTCGTGACCAGATACATCTACAACCGGGAGGAGTACGTGCGC TACTGGAACAGCCAGCCGGAGATCCTGGAGCGAACGCGGGCCGAGGTGGACACGCCGTGC GTCGCCATCTCCCTGTCCAGGACAGAGCCCTCAACCACACAACACTCTGGTCTGTTCG 141 ATCGTGGTGTCCGGCAGCTGGGACGGAGGTGGGGGCTCACTAGTGCCCCCGAGGCTCTGGA Сарв Pred. Jiao JJJ Chavaillaz P,

WPI; 2003-341126/32. P-PSDB; ABU72106.

Novel major histocompatibility complex fusion complex having presenting peptide covalently linked to MHC molecule containing peptide-binding groove, used for suppressing immune response in multiple sclerosis, allergies.

Example 17; Fig 27; 126pp; English.

The invention relates to a major histocompatibility complex (WHC) fusion complex (I) comprising an WHC molecule that contains a peptide-binding groove, and a presenting an WHC molecule that contains a peptide-binding groove, and a presenting peptide covalently (e.g. an antigenic peptide) linked to the WHC molecule, where (I) is capable of modulating the complex, where the WHC molecule is a class II WHC (e.g. mouse I-Ad or I-As, or human HLA-DR1 (human leukocyte antigen-DR1), a multivalent MHC fusion complex, omprising two or more linked complexes, identifying a peptide that can modulate the activity of T cells (linvolving introducing into host cells condition the fusion complex DR1, culturing the host cells under conditions suitable for expression of the Complex that modulate the activity of T cells), a single recombinant expression of the fusion complex, and selecting host cells, a single recombinant expression of the fusion complex MHC protein, a single recombinant expression of the fusion complex MHC protein, a single recombinant expression of the fusion complex. Also included are inducing an immune beta chains of the MHC fusion complex. The DNA constructs can contain hererologous leader peptide sequences and Kozak sequence for efficient expression of the fusion complex. Also included are inducing an immune response in a mammal (including vaccinating a mammal length MHC molecule that contains a transmembrate domain, and a presenting peptide that is a T cell receptor (TCR) antagonist or partial agonist and is covalently linked to the MHC protein, or DNA sequence coding for the fusion complex which is a single chain fusion of the mammal dincing a peptide that is a T cell receptore (TCR) antagonist or partial agonist and is covalently linked to the MHC protein, or DNA sequence coding for the fusion complex which is a single chain fusion or complex which is a single receptor or partial agonist and a mammal. The disorder is an autoimmune disorder. The mammal against a targeted disorder; mammal against a targeted nvention

The invention relates to new single chain major histocompatibility complex (sc-MHC) class II complexes that comprise a peptide binding groove, and a modified class II beta 2 chain or covalantly linked immunoquobulin (Ig) light chain constant (CI) region. The MHC complexes are useful for detection and analysis of peptide ligands, pathogenic Tecals, for functional, cellular and molecular assays. They can be used to identify and isolate T cell receptor and/or MHC agonists and antagonists. They can also be used to calls involved in immune-related disorders. They can also be used to raise antibodies and to screen immune cells. It is also use in a method of suppressing an immune response in mammals. The sc-MHC complexes of comprising modified class II beta 2 chains and/or Ig-C1 regions are soluble and provide enhanced yield. These MHC complexes also can contain single antigenic peptides readily isolated from expressing cells in significant quantities. The polyspecific MHC complexes also provide a means to detect cells expressing multiple target structures with a single complex. The present sequence represents a DNA encoding a single chain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             200
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  164

The invention relates to a major histocompatibility complex (WHC) fusion complex (I) comprising an MHC molecule that contains a peptide-binding groove, and a presenting peptide covalently (e.g. an antiganic peptide) inked to the MHC molecule, where (I) is capable of modulating the tent of inked to the MHC molecule, where (I) is capable of modulating the tent of complex, where the MHC molecule is a class II MHC (e.g. mouse I-Ad or I complex, where the MHC molecule is a class II MHC (e.g. mouse I-Ad or I complex, where the MHC molecule is a class II MHC (e.g. mouse I-Ad or I complex, where the MHC molecule is a class II MHC (e.g. mouse I-Ad or I complex complex complex complex or more linked complexed, identifying a peptide that can modulate the activity of T cells (involving introducing culturing the host cells under conditions suitable for expression of the Complex that modulate the activity of T cells), a single recombinant complex that modulate the activity of T cells), a single recombinant complex that codes for a T cell cost.mulacory factor and the alpha complex that codes for a T cell cost.mulacory factor and the alpha complex that codes for a T cell cost.mulacory factor and the alpha complex that codes for a T cell cost.mulacory factor and the alpha complex that codes for a T cell cost.mulacory factor and the alpha complex that codes for a T cell cost.mulacory factor and the alpha complex that codes for a T cell cost.mulacory factor and the alpha complex that codes for a finding vaccinating a nammal again or complex, or compression of the fusion complex. Also included are inducing a fusion complex, or ceptone in a mammal (including vaccinating a mammal identifying a peptide that contains a transmembrates domain, and confined to the mammal a DNA sequence comprishing an examement of the mammal and including an information or DNA sequence coding for the fusion complex which is a single chain fusion complex which is a single chain fusion complex of the mammal against a targeted disorder, and multiple solerosi
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              200

AAT17588 encodes a murine MHC fusion complex capable of modulating T cell activity encoded by the vector SCEI. The MHC fusion complex comprises at least one MHC molecule containing a peptide-binding groove and a presenting peptide covalently linked to the MHC molecule and opt. a transmembrane domain. DNA encoding a MHC fusion complex may be cloned transmembrane domain. DNA encoding a MHC fusion complex may be cloned controlly. DNA encoding a MHC fusion complex or a single chain fusion activity. DNA encoding a MHC fusion complex or a single chain fusion complexes may be used to suppress an immune response in an animal suffering from an immune disorder e.g. multiple sclerosis, insuling chronic allergies. The complexes may also be used in the treatment of chronic allergies. The complexes may also be used in the treatment of chronic allergies. The complexes may also be used in the treatment of chronic allergies. The complexes may also be used in the treatment of chronic allergies and dogs. The MHC fusion complexes can be produced such that they contain a single antigenic peptide including one of known structure, additionally a wide range of peptides can be contain a single antigenic peptide including one content that they contain a single antigenic peptide including one content that they contain a single antigenic peptide including one content that they contain a single antigenic peptide can be contain a single antigenic peptide including one contain a single antigenic peptides can be contain a single and complexes and c

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    224
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                320 AAT17586 encodes a murine MHC fusion complex capable of modulating T cell activity encoded by the vector SSC1. The MHC fusion complex comprises at least one MHC molecule containing a peptide-binding groove and a presenting peptide covalently linked to the MHC molecule and opt. a transmembrane domain. DNA encoding a MHC fusion complex may be cloned into a host cell to express the complex. The transformed cells may then complex to the used to identify peptides that modulate, pref. antegonise, T cell activity. DNA encoding a MHC fusion complex or a single chain fusion complexes may be used to suppress an immune response in an animal suffering from an immune disorder e.g. multiple sclerosis, insulin chapendent diabetes mellitus, rheumatoid arthritis, myasthenia gravis or chronic allergies. The complexes may also be used in the treatment of chronic allergies. The complexes may also be used in the treatment of chronic allergies. The complexes may also be used in the treatment of chronic allergies. The complexes may also be used in the treatment of chronic allergies, and additionally a wide range of peptides can be produced such that they contain a single antigenic peptide including one of produced for T cell interaction
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 141 ATCGTGGTGTCCCGCCAGCTGGGACGGAGGTGGGGCTCACTAGTGCCCCGAGGCTCTGGA 200

AAT17587 encodes a murine MHC fusion complex capable of modulating T cell activity encoded by the vector SCT1. The MHC fusion complex comprises at least one MHC molecule containing a peptide-binding groove and a presenting peptide covalently linked to the MHC molecule and opt. a cramsmembrane domain. DNA encoding a MHC fusion complex may be cloned transmembrane domain. DNA encoding a MHC fusion complex may be cloned controlled to express the complex. The transformed cells may then complex of a single chain fusion activity. DNA encoding a MHC fusion complex or a single chain fusion complexes may be used to suppress an immune response in an animal suffering from an immune disorder e.g. multiple sclerosis, insulin chaptened mallitus, rheumatcoid arthritis, myasthenia gravis or chronic allergies. The complexes may also be used in the treatment of chronic allergies. The complexes may also be used in the treatment of produced such that they contain a single antigenic peptide including one of known structure, additionally a wide range of peptides can be contain a single antigenic peptide including one contain a single antigenic peptide can be contained for T cell interaction
                                                                                                                                                                                                                                                                                                                                                                                                        /*tag= j

WPI; 2001-182944/18. P-PSDB; AAB67481. New soluble recombinant protein, useful e.g. as immunostimulant, comprises dimeric major histocompatibility complex molecule fused to immunoglobulin Rc region.

Example 1; Page 34-35; 43pp; French.

The specification describes soluble recombinant proteins that comprise at least a dimer formed from the alpha and beta-chains of MHC (major histocompatibility complex) Class I and II molecules in which at least one chain has, attached to its C-terminus, at least part of the Fc region of an immunoglobulin. The recombinant proteins, when linked to an antigenied, sate used to count and/or purify antigen-reactive T lymphocytes and to characterize their phenotype, e.g. in preclinical evaluation of vaccines. They are also used as immunostimulants, particularly for vaccine development (against infections and tumours), to count and determine phenotype of autoreactive T cells in subjects with, or at risk of developing, autoimmune diseases, e.g. for staging or evaluating treatments, and (to purify and/or enrich Ag-reactive T cells from cell cultures or patient samples, for use in subsequent curative or preventative cellular therapy. The present sequence encodes a recombinant protein of the invention, comprising a beta chain of MHC molecules

```

This sequence represents a hybrid IA beta chain gene, containing the chicken ovalbumin peptide (cOVA). This sequence was used in the construction of a hybrid IA alpha beta dimer. The encoded protein (plAd-OVA) was found to be more stable than the IA alpha beta dimer. The stability was decreased by the addition of a MHC groove specific binding peptide (e.g. see AAR82527, AAR82528 and AAR82531), compared to an increase seen on the addition of a MHC binding peptide to IE k/d-MC.

These complexes may be used to regulate an immune response. The complexes are capable of being recognised by a TCR alone or in combination with additional MHC proteins. These complexes are useful for theraputic purposes and experimental purposes. They can also be used as reagents for the treatment of diseases including autoimmune diseases, immunodeficiency diseases, immunoproliferation diseases, and graft-host rejection

Peptide-Class II major histocompatibility complex (MHC) composite, useful for detecting antigen specific CD4+ T-cell, comprises antigen peptide containing epitope of mucous membrane invasive protein, and extracellular region of MHC.

Example 1; SEQ ID NO 10; 30pp; Japanese.

The invention relates to a novel class II major histocompatibility complex (WHC) antigenic determinant of a mucous membrane invasive protein and the T-cell antigenic determinant of a mucous membrane invasive protein and the extracellular region of a class II MHC molecule or at least part of the extracellular region of the class II MHC molecule having an amino acid sequence comprising one or more deletions, substitutions on additions. The molecule of the invention may be useful for detecting an antigen-specific CD4+ T-cell by flow cytometry and for presenting a microorganism-derived mucous membrane invasive protein as an antigen. The method of the invention enables efficient detection of antigen-specific activation of CD4+ T-cells in the mucous membrane. The current sequence is that of the class II major histocompatibility complex-related I-Ab(alpha)-Cholera toxiocons of the invention.

region of

Example 3; SEQ ID NO 13; 30pp; Japanese.

The invention relates to a novel class II major histocompatibility complex (MHC) antiganic peptide composite comprising a peptide containing the T-cell antigenic determinant of a mucous membrane invasive protein and the extracellular region of a class II MHC molecule or at least part of the extracellular region of the class II MHC molecule having an amino acid sequence comprising one or more deletions, substitutions or additions. The molecule of the invention may be useful for detecting an antigen-specific CD4+ T-cell by flow cytometry and for presenting a microorganism-derived mucous membrane invasive protein as an antigen. The method of the invention enables efficient detection of antigen-specific activation of CD4+ T-cells in the mucous membrane. The current sequence is that of the class II major histocompatibility complex-related I-bi(alpha)-Escherichia coli hear-labile toxin B subunit (ITB)-leucine zipper (LZ)-BirA fusion cDNA of the invention.

useful Synthetic antigen presenting cell for activating CD4+ T cells - use treat autoimmune disease, e.g. diabetes, multiple sclerosis, Crohn'disease and inflammatory bowel disease, or allergy, e.g. asthma and contact sensitivity.

S

Example 2; Page 94-96; 141pp; English.

This nucleotide sequence comparises a PCR product obtained by amplification of mouse splenocyte cDNA using primers (see AAV12065 and AAV12066) designed for the amplification of IAd beta chain full-length cDNA. IAd alpha chain cDNA (see AAV12067) has been similarly obtained. The IAd sequences were cloned into metallothionein promoter (see AAV12062)-driven vector pRmHa-3 prior to sequencing. Major histocompatibility complex (WHC) class II IAd heterodimers were expressed at the cell surface of transfected Drosophila Schmeider 2 (ATCC CRL 10974) cells. The invention relates to the preparation and use of synthetic antigen presenting matrices, in particular antigen presenting cells such as insect cells that have been transfected to produce MHC

```
antigen presenting molecules with one or more accessory molecules. The matrices are used to activate naive CD4+ T cells and to shift the ongoing activation state into a preferred differentiated population of Th1 or Th2 cells. Applications include the treatment of autoimmune disease, e.g. diabetes, multiple sclerosis, autoimmune thyroiditis, systemic lupus erythematosus, myasthenia gravis, Crohn's disease and inflammatory bowel disease, or an allergy, e.g. asthma and contact sensitivity

                                                                                                                                                                                    This sequence represents a hybrid IA beta chain gene. This sequence contains a fragment of the IB alpha chain (residues 56-73), as well as a linker and cleavage site. This sequence was transfected into a B cell line (M12.3) using plasmid pM12-IAb-Ba. It was found that the encoded sequence was expressed in these cells. Complexes such as this may be used to regulate an immune response. The complexes are capable of being recognised by a TCR alone or in combination with additional MHC proteins. These complexes are useful for therapeutic purposes and experimental purposes. They can also be used as reasquite for the treatment of diseases including autoimmune diseases, immunodeficiency diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                136 ValAspThrAlaCysArgHisAsnTyrGluGlyProGluThrSerThrSerLeuArgArg 155

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                AAT17588 encodes a murine MHC fusion complex capable of modulating T cell activity encoded by the vector SCEI. The MHC fusion complex comprises at least one MHC molecule containing a peptide-binding groove and a presenting peptide covalently linked to the MHC molecule and opt. a transmembrane domain. DNA encoding a MHC fusion complex may be cloned into a host cell to express the complex. The transformed cells may then be used to identify peptides that modulate, pref. antegonies, T cell activity. DNA encoding a MHC fusion complex or a single chain fusion molecule may be used to vaccinate a mammal against a targeted disorder. The fusion complexes may be used to suppress an immune response in an animal suffering from an immune disorder e.g. multiple sclerosis, insulin-dependent diabetes mellitus, rheumatoid arthritis, myasthenia gravis or chronic allergies. The complexes may also be used in the treatment of livestock and pets such as cats and dogs. The MHC fusion complexes can be produced such that they contain a single range of peptides can be presented for T cell interaction
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            9

The invention relates to a major histocompatibility complex (WHC) fusion complex (I) comprising an WHC molecule that contains a peptide-binding groove, and a presenting peptide covalently (e.g. an antigenic peptide) [Inked to the MHC molecule, where (I) is capable of modulating the activity of a T cell. Also included are a DNA construct coding for the complex, where the MHC molecule is a class II MHC (e.g. mouse I-Ad or I-As, or human HLA-DR1 (human leukocyte antigen-DR1), a wultivalent MHC to peptide that can modulate the activity of T cells (involving introducing that can modulate the activity of T cells (involving introducing control of the host cells under conditions sultable for expression of the Complex, and selecting host cells that express MHC fusion complex, and selecting host cells that axpress MHC fusion complex that modulate the activity of T cells), a single recombinant expression vector comprising DNA that codes for the alpha and beta chains of the fusion complex. Also included are inducing an immune competation of the fusion complex. Also included are inducing an immune complex, and sequence coding for a fusion complex. Also included are inducing an immune cresponse in a mammal including vaccinating a mammal including vaccinating a mammal including vaccinating a mammal and including vaccinating a mammal influence and dispersession of the fusion complex. Also included are inducing an immune cresponse in a mammal and including vaccinating a mammal including vaccinating a single chain fusion complex. On the mammal a DNA sequence comprising a fusion complex or not complex, or not complex, but a mammal and a mammal influence comprising a transmembrane domain, and a contain complex mind a contain a transmembrane domain, and a contain complex that is a real receptor (TCR) antagonist or partial
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Novel major histocompatibility complex fusion complex having presenting peptide covalently linked to MHC molecule containing peptide-binding groove, used for suppressing immune response in multiple sclerosis,
                                                                                                                                                                             MHC; major histocompatibility complex; gene therapy; fusion complex; peptide-binding groove; T cell modulation; class II MHC; vaccine; autorimmune disorder; multiple sclerosis; rheumatoid arthritis; insulin-dependent diabetes mellitus; myasthenia gravis; immunogen; chronic allergy; mouse; ds; I-Ad; gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Grammer S, Edwards AC;

agonist and is covalently linked to the MHC protein, or DNA sequence coding for the fusion complex which is a single chain fusion molecule. The methods are useful for identifying a peptide that can modulate the activity of T calls, inducing an immune response in a mammal (including vaccinating a mammal against a targeted disorder) and for suppressing an immune response in a mammal. The disorders include an autoimmune disorder such as multiple sclerosis, insulin-dependent diabetes mellitus, rheumatoid arthritis, myasthenia gravis or chronic allergies. The present sequence encodes a mouse MHC class II I-Ad fusion complex of the

Major histocompatability complex fusion complex for modulating T cell activity - used in the treatment of immune disorders, e.g. multiple sclerosis, IDDM and rheumatoid arthritis.

Example 17; Fig 27; 210pp; English.

AAT17586 encodes a murine MHC fusion complex capable of modulating T cell activity encoded by the vector SSCI. The MHC fusion complex comprises at least one MHC molecule containing a peptide-binding groove and a presenting peptide covalently linked to the MHC molecule and opt. a transmembrane domain. DNA encoding a MHC fusion complex may be cloned into a host cell to express the complex. The transformed cells may then be used to identify peptides that modulate, pref. antagonise, T cell activity. DNA encoding a MHC fusion complex or a single chain fusion molecule may be used to vaccinate a mammal against a targeted disorder. The fusion complexes may be used to suppress an immune response in an animal suffering from an immune disorder e.g. multiple sclerosis, innul-dependent diabetes mellitus, rheumatorid arthritis, myasthenia gravis or chronic allergies. The complexes may also be used in the treatment of livestock and pets such as cate and dogs. The MHC fusion complexes can be produced such that they contain a single antigenic peptide including one. of known structure, additionally a wide range of peptides can be presented for T cell interaction

The invention relates to a major histocompatibility complex (MHC) fusion complex (I) comprising an MHC molecule that contains a peptide-binding groov, and a presenting peptide covalently (e.g. an antigenic peptide) crowplex (I) comprising an MHC molecule, where (I) is capable of modulating the cativity of a T call. Albo included are a DNA construct codaing for the complex, where the MHC molecule is a class II MHC (e.g. mouse I-Ad or I-As, or human HLA-DRI (human leukocyee antign-DRI), a multivalent MHC fusion complex complex that modulate the activity of T cells (involving introducing peptide that can modulate the activity of T cells (involving introducing complex, that modulate the activity of T cells (involving introducing peptide that can modulate the activity of T cells (involving introducing culturing the host cells under conditions suitable for expression of the MHC fusion complex, and selecting host cells that express MHC fusion complex, that modulate the activity of T cells), a single recombinant expression vector complex that modulate the activity of T cells), a single recombinant complex that modulate the activity of T cells), a single recombinant complex that codes for T cell costimulatory factor and the alpha and beta chains of the MHC fusion complex. The DNA constructs can contain beta chains of the fusion complex. Also included are inducing an immune response in a mammal (including vaccinating a mammal against a targeted disorder, by administering on member response in a mammal (including vaccinating a mammal about suppression or member very modulation of the ministering and mamne response in a mammal and the conding for a fusion complex which is a single chain fusion complex of the member and is covalently linked to the MHC protein, or DNA sequence coding for the fusion complex which is a single chain fus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Novel major histocompatibility complex fusion complex having presenting peptide covalently linked to MHC molecule containing peptide-binding groove, used for suppressing immune response in multiple sclerosis,

AAT17587 encodes a murine MHC fusion complex capable of modulating T cell activity encoded by the vector SCT1. The MHC fusion complex comprises at least one MHC molecule containing a peptide-binding groove and a presenting peptide covalently linked to the MHC molecule and opt. a transmembrane domain. DNA encoding a MHC fusion complex may be cloned into a host cell to express the complex. The transformed cells may then be used to identify peptides that modulate, pref. antagonise, T cell activity. DNA encoding a MHC fusion complex or a single chain fusion molecule may be used to vaccinate a mammal against a targeted disorder. The fusion complexes may be used to suppress an immune response in an animal suffering from an immune disorder e.g. multiple sclerosis, insulindependent diabetes mellitus, rheumacoid arthritis, myasthenia gravis or chronic allergies. The complexes may also be used in the treatment of livestock and pets such as casts and dogs. The MHC fusion complexes can be produced such that they contain a single antignic peptide including one of known structure, additionally a wide range of peptides can be presented for T cell interaction

The invention relates to new single chain major histocompatibility complex (sc-MHC) class II complexes that comprise a peptide binding groove, and a modified class II beta 2 chain or covalbantly linked care inwanced class II beta 2 chain or covalbantly linked cimmunoglobulin (Ig) light chain constant (CI) region. The MHC complexes are useful for detection and analysis of peptide ligands, pathogenic T-cells, for functional, cellular and molecular assays. They can be used to identify and isolate T cell receptor and/or MHC agonists and antagonists. They can also be used to cells involved in immune-related disorders. They can also be used to craise antibodies and to screen immune cells. It is also use in a method of suppressing an immune response in mammals. The sc-MHC complexes of suppressing an immune response in mammals. The sc-MHC complexes comprising midlied these form expressing cells in single antigent ceptides readily isolated from expressing cells in single antigent ceptides readily isolated from expressing cells in single complex. The polyspecific MHC complexes also provide a companion complex. The present sequence represents a DNA encoding a single chain complex. The present sequence represents a DNA encoding a single chain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   100
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                TyrAspSerAspValGlyGluTyrArgAlaValThrGluLeuGlyArgProAspAlaGlu 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  284

Original Bource text: Mus musculus (strain BALB/c, sub_species domesticus) spleen cDNA to mRNA.
The protein domains are as follows: first external protein domain The protein domains are as follows: first external protein domain (D1) at bases 93-356; second external protein domain (D2) at bases 639-791. [1] also sequenced the IA-alpha genes from mice of b,f,u and g haplotypes.
